PREFACE

*E "Read not to confute or contradict, nor to believe or take for granted.
but to weigh and consider"*

—Lord Byron

The advent of the antibiotics and the steroids was a revolution in Medical history. Prior to this, medicine was based on empirical theories and ignored scientific experimentation. With antibiotics, deaths from infectious diseases considerably reduced. However, soon the side-effects of the antibiotics became evident. Steroids have proved to be amongst the most harmful drugs. Presently the infectious diseases were replaced by more disabling conditions. Now we see a significant increase in the incidence of Heart diseases, Tumours, Diabetes, Hypertension, Renal failures. Allergic conditions like Asthma, Degenerative disorders and also Psychic and Psychosomatic diseases. Modern medicine is able to now pinpoint the illness but often can do very little besides that. For many of these diseases it offers only excuses, not solutions. One reason for this is that modern medicine lacks a common principle or law governing the treatment of the patient. This is covered up by a spate of palliative and often harmful drugging. In this situation, Homoeopathy comes forward and offers the answer.

Homoeopathy is neither a supposition nor a theory. It is a scientific principle hammered out of hard facts. It is a proven law backed by indisputable logic. It is the outcome of genius and years of painstaking work. Instead of fading with time, it grows stronger with clinical successes. Hahnemann, the founder challenged, "Homoeopathy appeals solely to the verdict of experience..... Repeat the experiment, carefully and accurately and you will find the doctrine confirmed at every step. Homoeopathy insists on being judged by the results".

Excerpt from Rajan Sankaran
„Homeopathy – The Science of Healing“

Following Hahnemann, homoeopaths have practised their art silently and the results have spoken loudly and unequivocally. The system has become popular. As the fame spreads people, are becoming curious. Even doctors practising other systems are showing active interest. The layman, the patient and the doctor now press for an explanation of the principles of Homoeopathy in the light of recent developments in science and medicine.

Ideas presented in this book are not novel. This work is like a necklace of pearls. The pearls are from the stalwarts from Hahnemann down to the present generation. The author has only contributed the connecting thread. An attempt has been made to cover all aspects of Homoeopathy.

If this book evokes an interest to go deeper into the fascinating ocean of Homoeopathy, it would have more than served its purpose.

—Rajan Sankaran

CONTENTS

| | |
